

**Development of Maternal Mortality in the 10 selected hospitals (in %)
from January 2008 until June 2009**

Hospital code	MMR-2009-1	MMR 2008-2	MMR 2008-1
26	1,48	2,24	1,99
25	2,42	3,45	1,08
24	2,20	5,65	6,17
23	0,67	0,09	1,02
22	1,78	3,83	1,81
16	0,80	0,71	0,38
15	2,64	1,38	2,98
14	2,01	1,73	3,93
13	0,37	0,82	0,82
12	1,74	2,2	1,56
Total	16,11	22,1	21,74
Mean	1,61	2,21	2,174
n	10	10	10
Maximum	2,64	5,65	6,17
Minimum	0,37	0,09	0,38

 continuous improvement
 improvement against previous half year

Interpretation: MMR = Maternal Mortality Rate MMR 2008-1 : results from January to June 2008
 MMR 2008-2 : results from July to December 2008
 MMR 2009-1: results from January to June 2009

MMR is counted as number of maternal deaths out of 100.000 deliveries. This means that in our statistic hospital No. 26 had 1990 dead mothers out of (virtual) 100.000 deliveries in 2008 first half year and 1480 dead mothers out of (virtual) 100.000 deliveries in 2009 first half year. Clear improvement.
